## **Report of the Workshop**

The process of the workshop is started with the motivation that the post graduate students studying in our region must become renowned scientist and academician in the field of science and engineering.

The workshop started with the inauguration on 6<sup>th</sup> February in gracious presence of Dr. Venkateshji Kabde, Chairman, Nanded Education Society, Nanded, Honorable Prof. S. M. Jogdand, M.C. member, SRTM University, Nanded, Prof. D. D. Pawar, Director, School of Mathematical Sciences, SRTMU Nanded, and Principal of our college Dr. D. U. Gawai.

Friends during the last six days we experienced fruitful deliberations in 22 academic sessions in which invited talks have been delivered by eminent personalities.

Dr. D. D. Pawar, S.R.T.M. University, Nanded. Dr. Sachin Ballal, Central University of Hyderabad, Hyderabad. Dr. Amol D. Khandagale, Dr Babasaheb Ambedkar Marathwada University, Aurangabad. Dr Nitin S. Darkunde, SRTM University, Nanded. Dr Mrs. J. D. Thenge, PAH Solapur University, Solapur. Dr. Bridgemohan Dayama, Dayanand Commerce college, Latur, Maharashtra. Mr Sandip Kage, Gondwana University, Gadchiroli. Dr Rahul Mapari, Government Vidharba Institute of Science, Amravathi. These experts in these six days highlighted the basic and advanced concepts in Mathematics subject which are in the syllabus of SET/ NET/ GATE examinations conducted by various agencies. They have given not only theoretical lectures but also practical knowledge of problem solving with suitable examples.

There are 52 participants from all over the Maharashtra state. I feel that this event will be beneficial to inspire and develop the competitive attitude among the students and teachers. I am sure that the discussion of the workshop will definitely encourage the mathematics students toward proper study and students will pass the SET/ NET/ GATE examinations. Hence I hope, the objectives of the workshop are achieved at some extent.

## Recommendations

1. Workshop should be organized in future of same type, so that students, young researchers will refresh their knowledge.
2. Long duration workshop should be arranged.
3. More lectures should be arranged on all topics.
4. Mathematics should be made easy rather than being treated as a difficult subject.
5. Workshop on SET/NET paper I should be arranged.

**Lunch Break: 02.00pm to 03.00pm**

Time: 03.00pm to 05.00pm  
Lecture: Dr. Jayprakash Duve

This screenshot shows a Zoom meeting in progress. The main window displays a Microsoft Word document titled "Chapte1". The text in the document reads: "In order to evaluate the quality of a design representation, we must establish technical criteria for good design. Later in this chapter, we discuss design quality criteria in some detail. For the time being, we present the following guidelines: 1. A design should exhibit an architectural structure that (1) has been created using recognizable design patterns. (2) is composed of components that exhibit good design characteristics (these are discussed later in this chapter), and (3) can be implemented in an evolutionary fashion, thereby facilitating implementation and testing. 2. A design should be modular; that is, the software should be logically partitioned into elements that perform specific functions and subfunctions. 3. A design should contain distinct representations of data, architecture, interfaces, and components (modules)." The Zoom interface includes a top bar with participant names (Vishal Marathe, JAYPRAKASH DUVE, Radhika Deshpande, BHAGYASHRI PINPRATIWAR), a toolbar with options like Unmute, Start Video, and Share Screen, and a right-hand panel titled "Participants (43)" listing all attendees.

This screenshot shows the same Zoom meeting, but the Microsoft Word document has advanced to a list of seven design guidelines. The text reads: "in this chapter), and (3) can be implemented in an evolutionary fashion, thereby facilitating implementation and testing. 2. A design should be modular; that is, the software should be logically partitioned into elements that perform specific functions and subfunctions. 3. A design should contain distinct representations of data, architecture, interfaces, and components (modules). 4. A design should lead to data structures that are appropriate for the objects to be implemented and are drawn from recognizable data patterns. 5. A design should lead to components that exhibit independent functional characteristics. 6. A design should lead to interfaces that reduce the complexity of connections between modules and with the external environment. 7. A design should be derived using a repeatable method that is driven by information obtained during software requirements analysis. These criteria are not achieved by chance. The software design process encourages good design through the application of fundamental design principles, systematic methodology, and thorough review." A sidebar on the left side of the Word window contains notes, including the word "software" and a definition: "a repeatable method that is driven by information obtained during software requirements analysis." The Zoom interface and participant list remain the same as in the previous screenshot.

The screenshot shows a Zoom meeting interface. The main window displays a presentation slide with text about antibiotic resistance genes (ARGs) in clinical origin and their environmental presence. The slide text includes: "genes (ARGs) in clinical origin, i.e., the contaminating resistance in the environment, signifies the increasing risk in humans. Some researchers look at the other side of the picture, i.e., clinical AR is an endowment by environmental bacteria and ARGs. They propose that ARGs that have been presented by clinical bacteria evolve from natural antibiotic-producing microbes and their competitors in natural habitats.<sup>23,24</sup> Antibiotic resistance in humans is either hospital-acquired or community-acquired, eg. MRSA and VRE MDR strains of *E. coli* and *A. baumannii* are increasingly being detected in community-acquired infections,<sup>22,25</sup> though ARB occur commonly in hospitals, where they cause nosocomial infections.<sup>26,27</sup> Of particular importance are ESKAPEE". Below this, there is a citation: "5716 Infection and Drug Resistance 2022:15". The slide also has a "Download" button and the name "Mustafa et al" in the bottom right corner.

### Evaluating the Role of Wastewaters as Reservoirs of Antibiotic-Resistant ESKAPEE Bacteria Using Phenotypic and Molecular Methods

**Introduction:** Wastewaters carrying thousands of human specimens from the community and representing the diversity of antibiotic-resistant bacteria (ARB) and antibiotic-resistance genes (ARGs) directly from the community mirror the extent of AR spread in the community and environment. This study aimed to investigate the occurrence and distribution of antibiotic-resistant ESKAPEE bacteria in the community versus clinical settings through monitoring nonclinical and clinical wastewaters.

**Methodology:** Seven wastewater samples were collected from different environmental sources. Isolates were obtained on general and selective media, biochemically characterized and antimicrobial-susceptibility tests performed by disk diffusion against 13 antibiotics according to the European Committee on Antimicrobial Susceptibility Testing (EUCAST) methodology using MicroScan 40i analyzer.

The system tray at the bottom shows the date and time as 3/24/2023, 1:40 PM.

This screenshot shows a Zoom meeting in progress, displaying a slide with the following content:

- ADVANTAGES**
  - Produces more in-depth, comprehensive information.
  - Uses subjective information and participant observation to describe the context, or natural setting, of the variables under consideration, as well as the interactions of the different variables in the context.
  - It seeks a wide understanding of the entire situation.
- DISADVANTAGES**
  - The very subjectivity of the inquiry leads to difficulties in establishing the reliability and validity of the approaches and information.
  - It is very difficult to prevent or detect researcher induced bias.
  - Its scope is limited due to the in-depth, comprehensive data gathering approaches required.

The Zoom interface shows a top bar with "Zoom Meeting" and "You are viewing Santosh Deosarkar's screen". The top left corner features video thumbnails for Vishal Marathe, Santosh Deosarkar, and Science College Nanded. The bottom toolbar includes controls for Unmute, Start Video, Participants (40), Chat, Share Screen, Reactions, Apps, Whiteboards, and More. ## LIVE How to Manage Literature Source?

- Managing literature sources can be a crucial aspect of research, and there are different methods and tools available to facilitate this process. Here are some general steps to manage literature sources:
- **Identify the Sources:** Start by identifying the literature sources relevant to your research question or topic. This may include academic articles, books, conference papers, reports, and other publications.
- **Organize the Sources:** Once you have identified the sources, organize them in a way that makes sense to you. This may involve creating folders on your computer, using a reference management software like Zotero, Mendeley, Digio, Endnote, or using a spreadsheet to track the details of each source.
- **Read and take Notes:** As you read through the literature, take notes on key points, ideas, and findings. This will help you remember important details and make it easier to summarize the literature later on.

**ETHICAL PROBLEMS IN SOCIAL SCIENCE RESEARCH**

- The complexity of a single research problem can give rise to multiple questions of proper behavior
- Sensitivity to ethical issues is necessary but not sufficient for solving them
- Ethical problems are the results of conflicting values
- Ethical problems can relate to both the subject matter of the research and the conduct of the research
- An adequate understanding of an ethical problem sometimes requires a broad perspective based on the consequences of research
- Ethical problems involve both personal and professional elements
- Ethical problems can pertain to science and to research
- Judgments about proper conduct lie on a continuum ranging from the clearly unethical to the clearly ethical

**RESEARCH INTEGRITY**

Research integrity may be defined as active adherence to the ethical principles and professional standards essential for the responsible practice of research.

- By *active adherence* we mean adoption of the principles and practices as a personal credo, not simply accepting them as impositions by rule makers.
- By *ethical principles* we mean honesty, the golden rule, trustworthiness, and high regard for the scientific record.

**4.EPISTEMOLOGY**

A. **Objective Epistemology:** It assumes that reality exists outside the individual mind and can be defined with external reality. It focuses its attention on the reliability of what is found.

B. **Constructive Epistemology:** According to it Truth can be found with engagement with reality which highlights the importance of contextual understanding of the topic.

C. **Subjective Epistemology:** It believes that truth can be individually decoded by imposing meaning on phenomenon

1) **z-test** : It is used for judging the significance of several statistical measures like **mean, mode and median.**

2) **t-test** : can be used for judging the significance of the **coefficients of simple and partial correlations.**

3) **χ<sup>2</sup>-test** : It can also be used to make comparisons between theoretical populations and actual data when categories are used.

4) **f-test** : It is used to compare the variance of the two-independent samples.

**Calculate t-test**

$N_1=50$     $M_1=14.5$     $SD_1=6.4$   
 $N_2=30$     $M_2=8.2$     $SD_2=5.8$

**Answer:**  
The test statistics is given by

$$t = \frac{M_1 - M_2}{\sqrt{\frac{SD_1^2}{N_1} + \frac{SD_2^2}{N_2}}}$$

Therefore,  $t = \frac{14.5 - 8.2}{\sqrt{\frac{6.4^2}{50} + \frac{5.8^2}{30}}}$   
 $t = 4.5226$

**Calculate t-test**

$N_1 = 110$     $M_1 = 18.7$     $s_1 = 3.72$   
 $N_2 = 110$     $M_2 = 12.3$     $s_2 = 6.21$

**Answer:**  
The test statistics is given by

$$t = \frac{M_1 - M_2}{\sqrt{\frac{s_1^2}{N_1} + \frac{s_2^2}{N_2}}}$$

Therefore,  $t = \frac{18.7 - 12.3}{\sqrt{\frac{3.72^2}{110} + \frac{6.21^2}{110}}}$   
 $t = 9.27$

## Hippocratic Oath

Hippocrates II (c. 460 – c. 370 BC), was a Greek physician of the classical period who is considered one of the most outstanding figures in the history of medicine. He is traditionally referred to as the "Father of Medicine" in recognition of his lasting contributions to the field.

One of the oldest binding documents in history, the Oath written by Hippocrates is still held sacred by physicians: *to treat the ill to the best of one's ability, to preserve a patient's privacy, to teach the secrets of medicine to the next generation, and so on.*

**Rationale:** Upon submission of the results of this study to the *Journal of Biomolecular Techniques*, one more control was identified to be crucial to conclusively prove the findings, according to reviews obtained - a control experiment that uses a protein which is known, not to interact with the protein of interest. A result showing no interaction in this experiment will provide conclusive evidence for the results and deductions already made. Therefore I seek funding for this final control experiment to wrap-up this project and publish this in the *Journal of Biomolecular Techniques*.

Gene bombardment has to be done to transiently express the two constructs - one with a gene for a non-interacting t-SNARE, and the second one with the v-SNARE (SGR3). The SGR3 construct is available from the original experiment. SYNTAXIN OF PLANTS 71 (SYP71) has been identified as a suitable non-interacting t-SNARE which localizes to intra cellular membranes (Sawastika et al., 2008), distinct from the localization of VTI11 in the original experiment. An expression construct with a fusion of half YFP-SYP71 has to be made using suitable restriction digestions and sub-cloning steps. The pure DNA will be extracted from these constructs and used for gene bombardment on onion cells to transiently express the fusion proteins. After 18-24 hrs, the onion cells will be screened for non-fluorescing cells. A construct with complete YFP-SYP71 will be used as procedural control.

It is not a regulatory document and does not represent the official policies of the countries and organizations that funded and/or participated in the Conference. For official policies, guidance, and regulations relating to research integrity, appropriate national bodies and organizations should be consulted.*

**RESEARCH & PUBLICATION ETHICS**

**What is meant by publication ethics?**  
 Publication ethics are the guidelines that are developed to ensure world-class scientific publications, public's **faith** in scientific research, and **proper credit for authors'** original ideas and work.

**What is the role of publication ethics?**  
 An author must be aware of good publication practices. While **refraining from scientific misconduct or research frauds**, authors should adhere to **Good Publication Practices (GPP)**. Publications which draw conclusions from manipulated or fabricated data could prove detrimental to society and health care research.

**Abstract:** The paper presents the results of a students' survey carried out at "Vande Aaravshree" University of Baram, Baram, on the quality of educational process on online platforms in the context of the COVID-19 pandemic. The study was addressed to students from the Faculty of Engineering and the Faculty of Physical Education and Sports. The results of survey highlighted that most of students were satisfied with the measures taken by the university during the lockdown period and the way the teaching-learning assessment process took place. However, some negative aspects were reported as lack of an adequate infrastructure for some students, less effective teacher-student communication and interaction, impossibility of performing practical applications, lack of socialization, lack of learning motivation, less objective examination (e.g., possibility of cheating), possibility of physical and mental health degradation (e.g., less time spent in front of screens, installation of a secondary identity). Consequently, for the more academic, more effective, and efficient measures must be implemented by the management of the university to remove, as much as possible, these negative issues and to improve the performance of online educational process.

**Keywords:** COVID-19 pandemic; lockdown period; quality of educational process; online platform; student survey

Academic research is a process of collecting, analyzing and interpreting information to answer questions or solve some critical problem. But to qualify as a good research, the process must have some specific properties. It is, as far as possible, be controlled, rigorous, systematic, valid, verifiable, empirical and critical. The main characteristics of a good quality research is listed below:

1. It is based on the work of others.
2. It can be replicated and do-able.
3. It can be generalized in other settings.
4. It is based on some logical rationale and tied to theory. In a way it has the potential to suggest directions for future research (open ended).

**(B) Main Text**  
 The main text provides the complete outline of the research report along with all details. Title of the research study is repeated at the top of the first page of the main text and then follows other details on pages numbered consecutively, beginning with the second page. Each main section of the report should begin on a new page. The main text of the report should have the following sections:

- i. Introduction
- ii. Statement of findings and recommendations
- iii. The Results;
- iv. The Implications drawn from the results

**5. The Footnotes: Regarding footnotes, one should keep in mind the following:**

(a) Footnotes are meant for cross references, citation of authorities and sources, acknowledgment and elucidation or explanation of a point of view. It should always be kept in mind that footnote is not end or means of displaying scholarship. The modern tendency is to make the minimum use of footnotes.

(b) Footnotes are placed at the bottom of the page on which the reference or quotation which they identify or supplement ends. Footnotes are customarily separated from the textual material by a space of half an inch and a line about one and a half inches long.

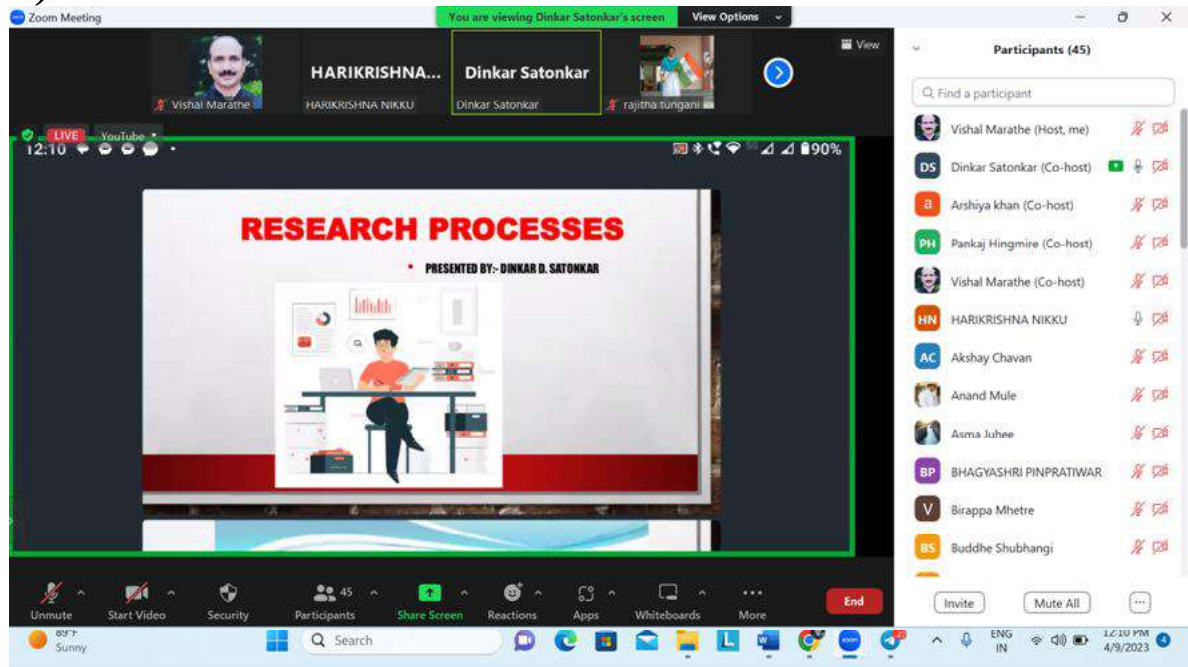

(c) Footnotes should be numbered consecutively, usually beginning with 1 in each chapter separately. The number should be put slightly above the line, say at the end of the quotation. At the foot of the page, again, the footnote number must be indented and typed a little above the line.

(d) Footnotes are always typed in single space though they are divided from one another by double space.

### What is Qualitative Data?

- Qualitative data is used to understand human behavior from informants perspective.
- Its non-numeric and descriptive data
- Qualitative research involves collecting and analyzing non-numerical data (e.g., text, video, or audio) to understand concepts, opinions, or experiences. It can be used to gather in-depth insights into a problem or generate new ideas for research.
- Qualitative data is information that cannot be counted, measured or easily expressed using numbers.
- Qualitative data is also called categorical data since this data can be grouped according to categories.
- It refers to the words or labels used to describe certain characteristics or traits.

### Importance of qualitative data

- ▶ Qualitative data is important in determining the particular frequency of traits or characteristics.
- ▶ It allows the statistician or the researchers to form parameters through which larger data sets can be observed.
- ▶ **Qualitative data is about the emotions or perceptions of people**, and what they feel.
- ▶ In quantitative data, these perceptions and emotions are documented.
- ▶ It helps market researchers understand their consumers' language and deal with the research problem effectively and efficiently.

### Science & Society

#### The End of Botany

Jorge V. Crisci,<sup>1\*</sup>  
Liliana Katinas,<sup>1</sup>  
María J. Apodaca,<sup>1</sup> and  
Peter C. Hoch<sup>2</sup>

Biologists unable to recognize common plants, and a decline in botany students, faculty, courses, university departments, and herbaria, highlight the current erosion of botany. How did we reach this crisis, knowing that plants form the basis for life? What are the causes? What can we do to reverse it?

Trends in Pl. Sc. 25: 12 (2020)

### CHALLENGES

- Scientific Reductionism
- Natural History Collections in Jeopardy
- Market Logic Applied to Science
- Language as a Constructor of Reality:  
"Taxonomy is a scientific discipline that requires description, but also theoretical, empirical, and epistemological rigor, a hypothesis driven approach, and field and lab expertise".
- Turning Thoughts into Action

### WAY FORWARD

#### THE BOTANY BILL: 6<sup>th</sup> March 2019

to promote botanical research and science capacity.

".....Urgent action is required because it is projected that, within the next decade, the USA will lose through attrition (such as retirement without replacement) almost half of its experts in botany, and specifically those who know and can identify plants, which will generate direct and indirect biodiversity costs and economic consequences."

### THE INDIAN SCENARIO

#### CHALLENGES

- Training:**
  - Too much emphasis is placed on the detailed life histories of selected representative plants, and less on the issues of environmental relevance
  - Less exposure to fieldwork
  - Less exposure to the advance tools & techniques
- Funding:** Less funding for taxonomy research
- Permits:** Stringent Biodiversity Laws even for the Govt. funded Projects
- Collaborations:** International collaborations are hindered due to stringent biodiversity regulations

#### WAY FORWARD

- PEET: Partnerships for Enhancing Expertise in Taxonomy
- 'SERB'
- PBI: Planetary Biodiversity Inventories
- 'National Biodiversity Mission'

Are reports of the death of taxonomy an exaggeration?

Shrinking biodiversity, dwindling taxonomy and building a broader science

"As long as there are people on earth to feed and an environment fit for plants and humans to grow in, the service of botanists will continue to be needed."

"If today the function of botanists in society is in question, then university departments must carry some of the blame, for without doubt many potential and existing botanists, not to mention the general public, are struggling through the trees looking for the wood."
